

Product Bulletin

2007-2009 Dodge Trucks 6.7L Turbo Diesel Fuel Filter

This bulletin addresses a “new design” diesel fuel filter introduced by Chrysler for 2009 model year Dodge Ram (2500/3500 pick up and 3500/4500 cab chassis) trucks equipped with the Cummins 6.7L diesel engine built in late 2008. The “new design” filter was installed on all noted trucks built on and after December 15, 2008. The “new design” fuel filter supersedes the “old design”.

Due to the superseded filter, older models (2007- early 2009) arriving in service centers, may have the new design filter canister installed. To identify which cartridge filter is required, a visual identification of the canister must be made.

If the **old design** canister is removed from the vehicle (see figure 1), SC filter cartridge part# **56080** must be used. The old design canister has Mopar part# 05183410AA noted on the canister label.

If the **new design** canister is removed from the vehicle (see figure 2), the new design filter cartridge SC part# **56082** must be used. The new design canister has Mopar part# 68061633AA noted on the canister label.

Chrysler recommends converting all vehicles using the “old design” fuel filter to the “new design” fuel filter (SC part# **56082CAP**). After the conversion, SC part# **56082** would be installed as the replacement filter cartridge.

The information below can be used to identify the old and new designs. If the canister label is missing, a visual comparison can be made using the images below. There are a few distinct differences with the bottom of the canisters and the drain valves.

Caution: Always ensure correct filter cartridge is used with corresponding canister. Never interchange filter cartridges and canisters.

Old Design

Filter Cartridge: SC part# **56080**
Filter Canister: Mopar part# **05183410AA**

Fig. 1

New Design

Filter Cartridge: SC part# **56082**
Filter Canister: Mopar part# **68061633AA**
Filter with Canister: SC part# **56082CAP**
